Dr. Robert Young

Robert Young has had the extreme good fortune to study the sedimentology and geomorphology related to the most fossiliferous ice age fauna discoveries in glaciated North America. Most of his research has been in collaboration with the Royal Alberta Museum, while studying with excellent supervisors and mentors at the Universities of Alberta and Calgary, and he owes a dept of gratitude to Jim Burns at the RAM. He has a passion for public education, and has contributed to several museum galleries, such as the Royal Tyrrell Museum. Currently, he is fortunate to work at UBC Okanagan, where he meets some very bright minds that he is happy to share his interests.
